In Business to Promote You ●●●

## Supplying Artwork

Please read the information below prior to sending us your artwork.

### SHAPES & CUT VINYL

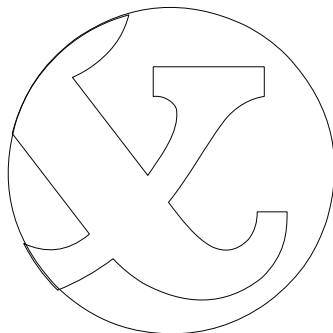

Where the job consists of cut vinyl text and graphics, built up or flat cut letters for shop fascias, shaped panels for signage or any product that requires cutting using either a plotter or router, the following file types will be required:

Original VECTOR type file in either ai (adobe illustrator), eps (encapsulated postscript) or pdf (adobe pdf).

Please be sure that all text is converted to graphics/outlines or that the relevant font file is supplied with the artwork. If neither is supplied then our program will automatically change the font to the nearest style.

We cannot use tif or jpeg files for cut vinyl or router production. Jpeg and tif files that are saved as ai, eps or pdf files are not suitable and cannot be used.

### DIGITAL PRINT

Where digital printed products are required, for example, site boards, banners, vehicle wraps, exhibition equipment and portable display products, the following file types can be used:

Original VECTOR type files, as above, work best (ai, eps, pdf)

We can use Jpeg and tif files. Please be sure that your images are at least 300dpi and 1:1 or 1:2 scale. Larger images (2.4m x 1.2m) will be fine with a 150dpi resolution.

CMYK colour references are preferred although Pantone colour references are accepted.

We use Adobe Illustrator CS3 on PC's. We do not use Apple MAC at the moment.

### SENDING YOUR FILES

Files can be sent via email to [sales@prestige-signs.com](mailto:sales@prestige-signs.com), by post using the address on the homepage or can be sent via file transfer companies like Yousendit or We Transfer.

If you have any questions concerning sending your artwork, or if you require further assistance, please do not hesitate to call us.
